Preface

This document is for users and contributors who need a guide to the documentation and repository layout.

A printer-friendly PDF file for this document is available in `docs/pdf/`.

Document Version History

Document	Runner	Test	Date	Comment	Author/Editor
1.0.0	1.0.0	1.0.0	2026-06-11	Initial version.	Paul Sinclair

- The **Document** column records the document's version.
- The **Runner** column records the Runner API version current at the time this version of the document was published.
- The **Test** column records the Test API version current at the time this version of the document was published.

A version has the format `M.m.p` (Major, minor, patch) where `M` is the major version, `m` is the minor version, and `p` is the patch version. `p` increments when the document is updated without a change to `M` or `m`, and resets to 0 when `M` or `m` increases. The first table entry is the most recent version for this document at the time this document was published.

Table of Contents

Introduction	1
Documents	2
Repository Layout	3

1. Introduction

The documentation consists of documents for:

- **Users:** Public-facing framework and API documents.
- **Contributors;** Guide and API internal documents.

Document types:

- **README:** Introduction or description.
- **Guide:** Usage information.
- **Reference:** Reference companion to a guide.

Document formats:

- **.md:** Markdown documentation format for online viewing.
- **.pdf:** Portable Document Format for printing. A BriteTest .pdf file is generated from a BriteTest .md file using genpdf in the scripts directory of the repository root.

2. Documents

The following are the user and contributor documents.

User documentation:

- **README.md** – Introduction to BriteTest.
- **Documentation_Guide.md**: A guide to documents and the repository layout.
- **Glossary_Reference.md**: An alphabetically ordered list of terms generally used in the documentation (emphasizing their specific meaning in BriteTest) and terms often used in the testing domain.
- **Runner_Guide.md**: Concepts, usage, and examples for the Runner Framework and API.
- **Runner_Reference.md**: Reference document for the Runner API.
- **Test_Guide.md**: Concepts, usage, and examples for the Test API.
- **Test_Reference.md**: Reference document for the Test API.

Contributor documentation:

- **README.md**: Directory description, one for each subdirectory.
- **Contributor_Guide.md**: Versioning, documentation/coding guidelines, branching, testing, and CI/release checklists.
- **Runner_Internal_Guide.md**: Implementation concepts, architecture, and high-level design for the Runner API.
- **Runner_Internal_Reference.md**: Reference for the implementation of the Runner API.
- **Test_Internal_Guide.md**: Implementation concepts, architecture, and high-level design for the Test API.
- **Test_Internal_Reference.md**: Reference for the implementation of the Test API.

3. Repository Layout

The following shows the layout of the GitHub repository (core files and directories):

```
.github/workflows/ci.yml
.vscode/
.gitignore
build_test_runner.ps1
LICENSE
Makefile
README.md
build/                                # Build outputs and related artifacts.
config/                               # Repository configuration files.
    contributors.md                  # List of authorized contributors.
    markdownlint.json              # Customize lint behavior.
docs/                                 # User and contributor documentation.
    branding/                      # Monograms, logos, and document logos.
    md/                           # `*.md` files (base documentation).
    pdf/                          # `*.pdf` files generated from `*.md` files.
    docx/                         # `*.docx` files generated from `*.pdf` files.
examples/                            # Usage examples.
include/                             # Public API `.h` headers.
    runnerapi.h                   # Declare Runner API
    testapi.h                    # Declare Test API
reports/                             # Generated report files.
scripts/                             # Automation script assets.
    bin/                          # Scripts (e.g., gendocs, mkbranch).
    helpers/                      # Helper scripts for bin/scripts/*.
    tests/                        # Test scripts for testing bin/scripts.
src/                                 # API `.c` sources.
    runnerapi.c                   # Definition of Runner API.
    testapi.c                    # Definition of Test API.
tests/                               # Testing assets.
    golden/                       # Golden/baseline files for comparison.
    include/                      # Test `.h` headers.
    input/                        # Test input files.
    output/                       # Captured test outputs to compare against golden/.
    src/                          # Test `.c` source files.
    tmp/                          # Temporary test outputs.
```
